

MISSY technical documentation

Revision addendum · website and Command/Console mode updates

Base document	qPCR_QC_forensics_documentation_2026-09-25_base_plus_update.pdf
Base pages	1,117 (1,109 template pages + 8-page addendum of 25 September 2026)
Revision date	27 September 2026
Current HTML	index.html (identical to qpcr_qc_forensics.html)
Size	940,696 bytes
SHA-256	8DF4472EBA4831BAB5C0C712A30C60CDD20AD3E179ED1164C91C441DB33C770B
Live page	https://mihaionitabio-alt.github.io/lc480-ixo-qc-exportv2/

This addendum is appended to the 25 September 2026 document without reflowing any earlier page. It records the changes made to the single-file page after that build: the public page identity, the bottom page bar, the single website download, Command mode documentation and the target=all correction, the per-chart types in the default script, and the Console mode keyboard keys. All earlier chapters, figures and the 25 September addendum remain valid except where a section below states otherwise.

1. Scope of the update

The 25 September 2026 PDF (1,117 pages) remains the document body. The pages below describe only code and measured behaviour added after it.

- Public page identity: heading, document title and blue status bar.
- Bottom page bar: language selector and one *Download website* button.
- Static hosting: inline empty favicon.
- Command mode: option reference (COMMAND_MODE.md), full-example lines in the script template and target=all meaning every target.
- Default script: each control chart selected with its own chart type.
- Console mode: labelled keys press their buttons.

Document rule: this file is the 25 September PDF followed by this addendum. The append-only method keeps all existing page geometry and page text intact.

2. Current website implementation

Item	Measured value
HTML file	index.html · 940,696 bytes
SHA-256	8DF4472EBA4831BAB5C0C712A30C60CDD20AD3E179ED1164C91C441DB33C770B
Page identity	“Missy, RUO - A single-file local HTML page for .ixo, .eds/.edt and .rdml experiment runs” in the <title>, the <h1> and the blue status bar.
Mode surface	Command mode, Console mode and Assisted mode share one catalogue and write the same report/archive outputs.
Writing rule	Stored Cq/Ct values are retained. Missing values are not converted to zero. The page runs locally and uploads no experiment file.

Current source locations

Item	Lines	Purpose
<link rel="icon">	3	Inline empty favicon; no /favicon.ico request on static hosting.
<title>, <h1>	4, 477	Public page identity.
.console-page-name	482	Page identity in the blue status bar (ellipsis-safe).
Script template	915–1193	Options line and full example line above every command.
#dl-site	1237, 10658	One website download button in the bottom bar.
downloadWebsiteArchive	8355	Builds the website archive in the selected language.
mgInit (keydown)	8160–8175	Console mode key listener.
selGraphContext	11421–11427	Resolves target; all means every target.

3. Page identity and bottom page bar

- The public heading and the document title read: *Missy, RUO - A single-file local HTML page for .ixo, .eds/.edt and .rdml experiment runs*. The MISSY logo is no longer shown in the page header; the option 3 mark is still produced for exported SVG/PDF artefacts (25 September addendum, section 5).

- The same identity text is shown in the blue console/status bar below the heading, beside the current data state; it is truncated with an ellipsis on narrow layouts.
- The language selector and the website download button moved into the fixed bottom-left page bar (#statusbar), next to the operational status, Command mode, Console mode, Assisted mode, status report and Details controls. The language selector keeps its ID.
- The separate English and Chinese archive buttons were replaced by one **Download website** button (#dl-site). It calls the existing archive generator in the language currently selected.
- An inline empty favicon (<link rel="icon" href="data:,">) prevents a missing-favicon warning on static hosting.

4. Command mode

A complete option reference is delivered as `COMMAND_MODE.md` (in this release folder). It lists the line syntax, every command, name patterns, the accepted shape of every option value, which figures actually use `target` and `control`, all 58 control charts with their own type and suitable type values, a complete commented hand-over script and the error messages.

The Script-box template now carries a # full example: line under every # ... options: line, with every option filled in, and two header notes:

```
# target=all (or target= left empty) means every target; target=<name> must match a target
  name exactly.
# control=<number> is the position of the control in SOP section 3, counted from 0.
# img:curves options: target=<text>; signal=...; log=...
# full example: select img:curves target=HPV16 signal=drn log=yes (used by this figure:
  target, signal, log)
```

Correction. Before this revision `target=all` was compared as a target literally named “all”, so the shipped template drew empty curve, plate, standard-curve, end-point and control figures. `target=all` (any case) now means every target, and `img:curves` with `target=all` draws every target instead of only the first.

```
11424 /* target=all (any case) is the documented way to ask for every target; it must not be
      read as a target called "all" */
11425 const allTargets=/^all$/i.test(o.target||"");
11426 return {g,ri,run:RUNS[ri],target:allTargets?"":o.target||(g.id=="curves"?((typeof
      gTargets=="function"&&RUNS[ri]?gTargets(RUNS[ri])[0]:"")||""):""),
```

5. Control-chart types in the default script

Every `select cc:... line` in the template now uses the chart’s own type instead of `type=i` for all 58 charts. With `type=i`, the 16 p/u/c/funnel charts drew empty and were written to errors/ in the archive.

type	Charts	Example line in the template
i	31	select cc:<name> type=i x=order
p	10	proportion charts
trend	5	select cc:heat_rate type=trend x=order
ewma	3	exponentially weighted moving-average charts
c	3	count charts
xbars	2	subgroup mean charts
funnel	2	funnel plots
cusum	1	select cc:overshoot type=cusum x=order
u	1	rate-per-unit chart
total	58	

6. Console mode keyboard keys

The Console mode buttons showed keys (1–9, 0, –, +, arrows) but no key was handled outside the chart-type and x-axis pick lists. A key listener now presses the button that currently shows the key: digits as labelled, - or – (U+2212) zoom out, + or = zoom in, and the arrow keys pan.

- Active only while Console mode is open.
- Never while a pick list is open; the list keeps its own 1–9 / 0 / Escape keys.
- Never while typing in a text field, and never with Ctrl, Alt or Cmd, so browser zoom (Ctrl + / Ctrl –) is unchanged.
- The reset-view button (🔄) has no key and stays click-only.

```

8167 document.addEventListener("keydown",e=>{                                /* without a sheet, a key presses
      the button that shows it */
8168   if(!MG.open||MG.sheet||e.defaultPrevented||e.ctrlKey||e.metaKey||e.altKey)return;
8169   const tg=e.target,tag=tag&&tg.tagName;
8170   if(tag==="INPUT"||tag==="TEXTAREA"||tag==="SELECT"||(tg&&tg.isContentEditable))return;
8171   const key={"-":"-","=":"+",ArrowLeft:"<","ArrowRight:">","ArrowUp:"↑","ArrowDown:"↓"}[e.
     key]||e.key;
8172   const b=[...document.querySelectorAll("#mg-actions .mg-act")].find(x=>{const k=x.
     querySelector(".k");return k&&k.textContent.trim().split(/\s/)[0]===key;});
8173   if(!b)return;
8174   e.preventDefault();b.click();
8175 });

```

7. Validation record

Check	Result
Page load	Loaded in Chromium with no page errors after every change listed above.
Page identity	Heading, document title and blue status-bar text confirmed; header logo absent.
Bottom bar	Language selector and #dl-site are descendants of #statusbar and render bottom-left.
Script template	The whole template and all 84 full-example lines parse without errors.
Control-chart types	All 58 select cc: lines use their own type; the whole template parses without errors.
Console keys	Every labelled key reaches its command; 0 leaves the console; a pick-list number is not also sent to the chart buttons.
PDF merge	1,117 pages of the 25 September PDF preserved at page-text level; this addendum appended.

Appendix A. Changed-item inventory

Item	Current responsibility
<title> / <h1> / .console-page-name	Public page identity.
#statusbar .bottom-page-tools	Language selector and website download in the bottom bar.
#dl-site / downloadWebsiteArchive	One archive download in the selected language.
Script-box template	Options and full-example lines; per-chart type values.
selGraphContext	target=all resolves to every target.
mgInit keydown listener	Console mode keys press the labelled buttons.
